

Tree @ route: ''

```
<inbox-page>  
  <header-bar>  
  <nav-items-list>  
  <chat-items-list>  
  <mail-items-list [routerLink]="mails/:id">
```

MailItemsList.route.ts

Path: '',

Component: MailItemsListComponent

Tree @ route: 'mails/:id'

```
<inbox-page>  
  <header-bar>  
  <nav-items-list>  
  <chat-items-list>  
  <mail-item>
```

MailItem.route.ts

Path: 'mails/:id',

Component: MailItemComponent

Therefore, DOM should be as-is, and **router-outlet** should replace, <mail-items-list> and <mail-item>

Tree @ route: “

```
<inbox-page>
  <header-bar>
    <branding>
    <search-box-items-list>
      <search-box-results>
    <user-profile>
```

Tree @ route: ‘search/:param’:

```
<inbox-page>
<header-bar>
  <branding>
  <search-box-items-list>
    <search-box-results>
      <search-box-result-item>
  <user-profile>
```

searchBoxResultItem.route.ts

Path: ‘search/:param’,
Component: SearchBoxResultItem

TLC (Top level Component) (GMail/App/app.component.*/main) : “

- FLC (Feature level component), in my project it will be signinforms or/and inbox-page

‘signin/user’, ‘signin/password’	-	SignInComponent
‘inbox’	-	InboxPageComponent
